Communicating and Sharing the Value of Water: test cases

This seminar proposes to use the instruments of social sciences and communication to analyse some cases in which the symbolic and material value of water is conveyed through a variety of tools, from those related to training and information to those linked to the active participation of users and suppliers. The former concern more classic initiatives such as advertising campaigns and environmental education courses, while the latter are rarer and regard simulations, public debates, and proposals for crowdfunding. Many cultural centres in Italy focused on the value of water have undertaken the first type of actions. This seminar intends primarily to find and comment on cases of the second type.

ROOM Innovation - Hall 18 UNIVERSITA' TRIESTE

Introduce e coordina
Giorgio Osti, Sociologo dell'ambiente Dipartimento Scienze Politiche e Sociali, Università di Trieste

Ne parlano
